

Company Profile

Medigarments Ltd is the company behind the internationally recognised brands Jobskin® and SDO®. We lead the way in rehabilitation therapy and are the largest UK manufacturer of specialist custom compression garments supplied through therapy and orthotic professionals. Our reputation for the design, and supply of technically advanced garments has been built over 40 years supplying the highest quality made-to-measure products.

Our garments are used to manage scarring as a result of burns or trauma injury. In the field of dynamic compression, they are used to increase sensory and proprioceptive feedback as well as provide musculoskeletal support.

We are dedicated to providing the ultimate in compression therapy management, with the focus on improving patient quality of life.

How to order SDO® from Medigarments:

SDO® Original is a prescribed medical garment that requires specialist measuring and fitting by a trained clinician. If you're interested in exploring whether SDO® is right for you or your patient, our clinical team is here to help. We can offer guidance, provide assessments, and work alongside your managing healthcare professional to ensure the best outcome.

Get in touch with us today for advice or to arrange an assessment.

Sensory Hug®

Sensory Hug®

Helping manage sensory-overload behaviours through deep pressure therapy.

The Sensory Hug® is a garment designed to support the modulation of sensory input and manage sensory-seeking behaviours through consistent proprioceptive feedback. The Sensory Hug® aims to enhance the function of the wearer and help normalise activities of daily living by providing consistent and continuous deep pressure. Sensory Hug® garments may also help to reduce over-activity and abnormal behaviour patterns in individuals with sensory processing difficulties.

Designed for individuals with:

- Autism
- ADHD / ADD
- Sensory Integration Disorder (SID)
- Sensory Processing Disorder (SPD)

To assist clinicians and caregivers in addressing sensory dysregulation by providing targeted deep pressure stimulation.

Clinical Studies

Clinical evidence shows that deep pressure can reduce overactivity and abnormal behaviours in individuals with sensory processing difficulties. However, it's often impractical to apply consistent deep pressure manually—so the Sensory Hug® was developed to meet that need in a wearable form.

Research has shown that pressure therapy improves functioning in individuals with high sensory input needs.

"Treatment with pressure therapy can improve the daily functioning of individuals that require and crave sensory input" – Bestbier & Williams, 2017.

"The use of compressive garments in individuals with autism and severe proprioceptive dysfunction led to significant improvements in irritability, hyperactivity, and motor control after six weeks of consistent wear" – Guinchat, V., Chouaf-Lakhdar, 2020.

"Pressure garments contributes to improvements in sensory-motor function and emotional regulation in a child with autism spectrum disorder" – Harel et al, 2017.

Benefits

- Increase attentiveness and concentration
- Improve body awareness and stability
- Manage sensory-seeking behaviours
- Support daily functioning
- Provide calming and comfort
- Reduce stress and anxiety
- Promote coping and emotional regulation
- Reduce restlessness

Features

- Worn under or over everyday clothing
- Allows full freedom of movement
- Supports daily routines or specific activities
- Usage can be tailored to the individual's sensory needs
- Explore our range of SDO® Sensory Hug® designs. Full details and available sizes can be found in our Data Sheet
